

Glossary

Biennial transparency report (BTR): the BTR is going to supersede the current BUR, with the first BTR to be submitted no later than 31 December 2024, as decided at COP24, with some discretion for LDCs and SIDS for timing. BTR requirements build on current existing reporting arrangements and as such they share many elements with the BURs, albeit with a higher level of detail and accuracy. Main changes consist in ensuring completeness and accuracy of the information reported in the GHG inventory, and in tracking progress and reporting on the implementation and achievement of the NDC.
