WHAT THE ASSESSMENT OF INDACS COULD LOOK LIKE?

The Process does not have to be the same before and after Paris

Why?

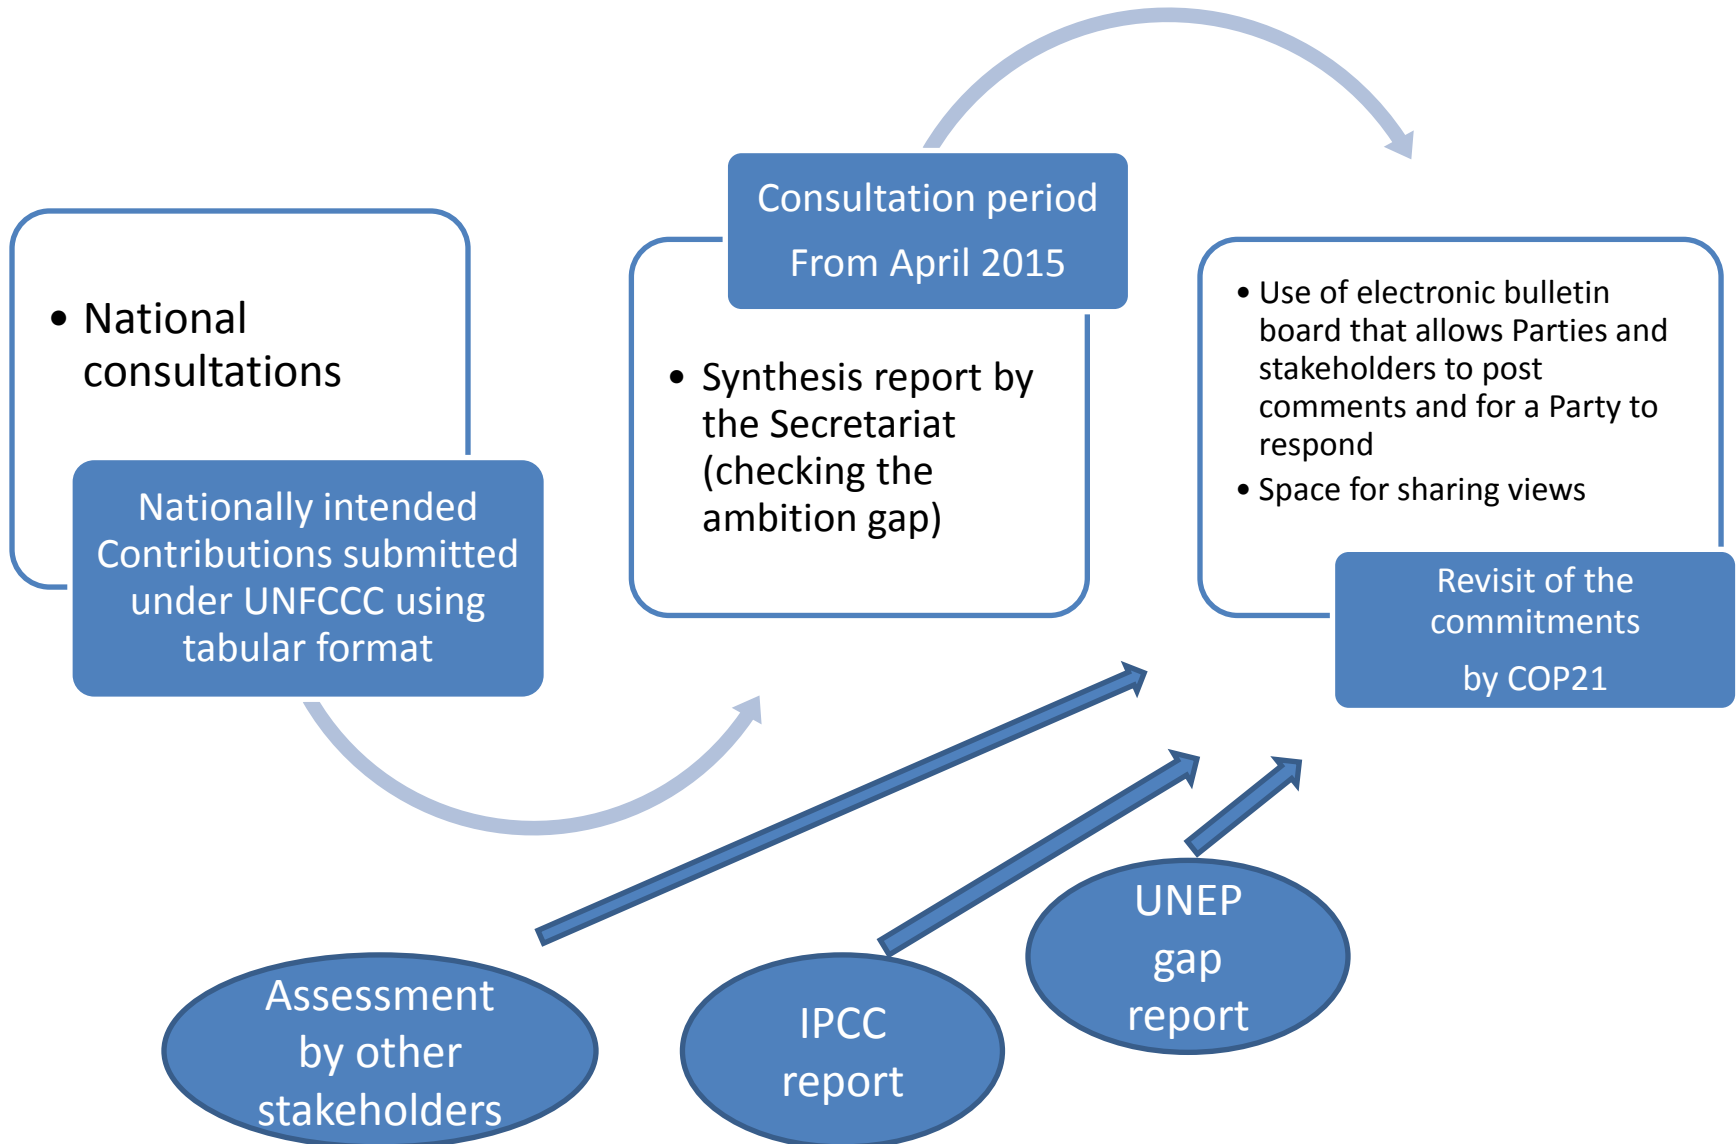

- Time to design and implement it
- Resources implications
- ICA/IAR demand

Why do we need it?

- Accountability tool
- Pressure tool
- Setting the right precedents
- There is a demand for it

Can get better as we learn from first round

Pre- 2020: Key elements of the Process

Post-2020

- Regular cycle of contributions
- Aggregate and individual assessment
- Equity assessment – commission work to develop an ERF
- Leverage other Assessments
 - Review of implementations through MRV
 - Assessment of Support
 - UNFCCC 2013-2015 review
 - IPCC

Institutional options

- As part of IAR/ICA perhaps enhancing the process to consider issues not originally in the mandate
- A new process, outlined below

Other considerations

- A staggered approach: this means that the 192 countries may not be assessed at the same time or at the same frequency.
- Explore the possibility of regional or “group of countries” assessments
- Set up permanent teams for undertaking the various assessments

THANK YOU!

Gracias!
