## Cost-effective Interventions to Promote Affordable Renewable Energy

Finance ready mitigation actions: building blocks for NDC achievement  
25 - 27 April 2017  
Accra, Ghana

# UNDP's Work on Sustainable Energy

UNDP currently manages

a portfolio of **262 active sustainable energy projects**

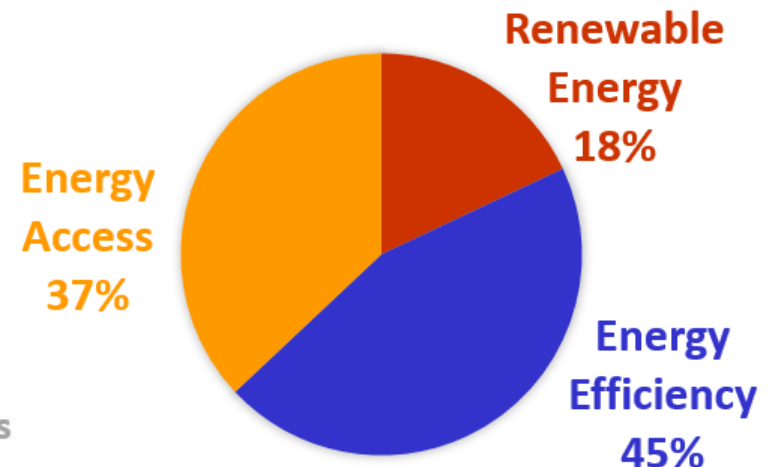

in **111 countries with**

**over USD 1 billion in grant financing and USD 5.7 billion in co-financing**

Portfolio breakdown projects by region

Portfolio breakdown projects by Thematic Area

# Derisking Renewable Energy Investment

## High financing costs penalise renewable energy

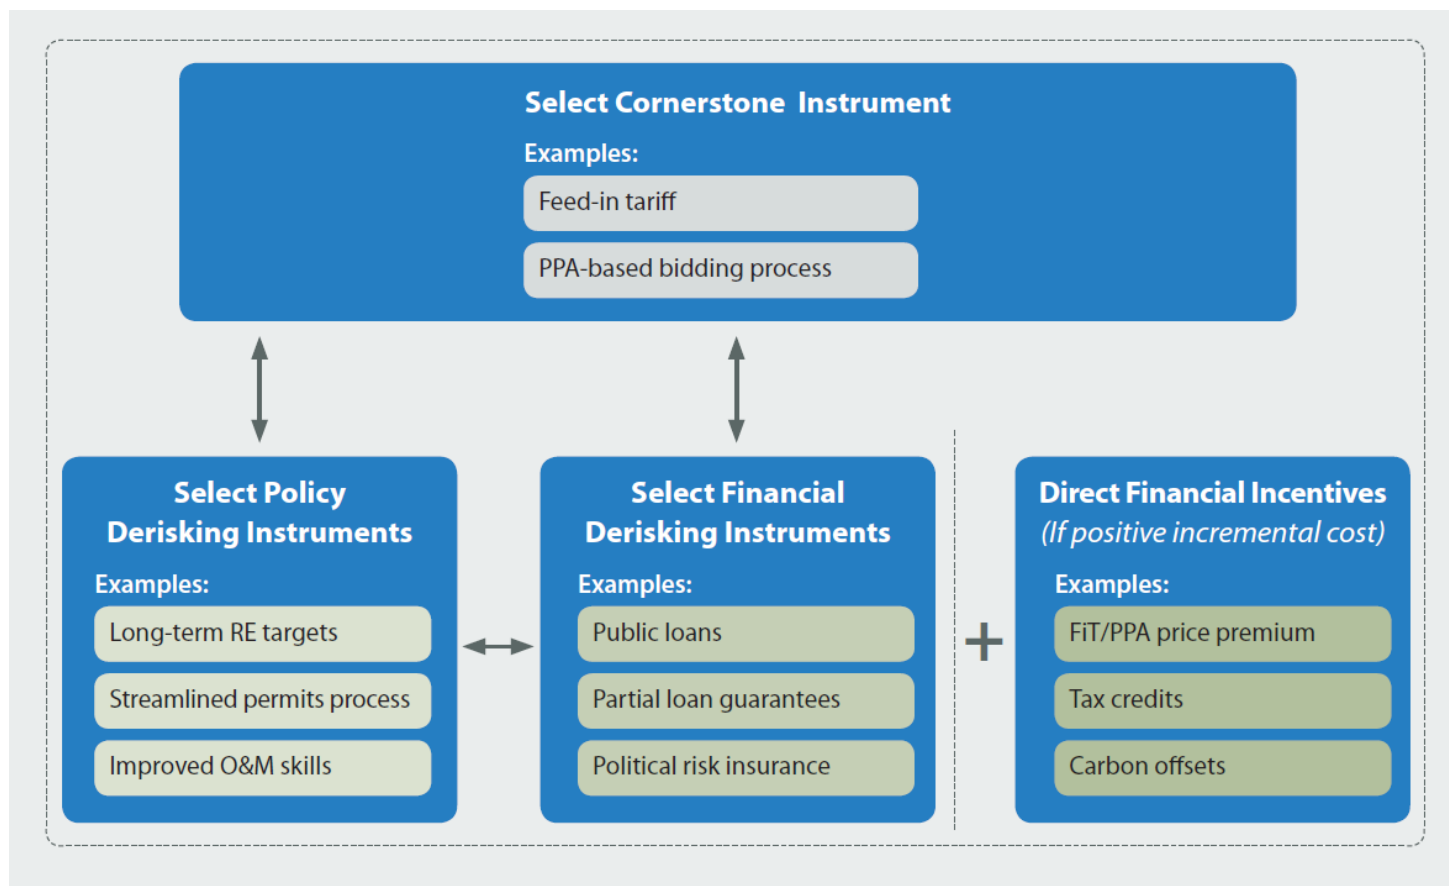

UTILITY SCALE  
 LEVELIZED COSTS OF RENEWABLE ENERGY VS FOSSIL-FUEL ENERGY  
 DEVELOPED VS. DEVELOPING COUNTRIES

Source: UNDP, *Derisking Renewable Energy Investment* (2013). See Annex A of the report for full assumptions.  
 All assumptions (technology costs, capital structure etc.) except for financing costs are kept constant between the developed and developing country.  
 Operating costs appear as a lower contribution to LCOE in developing countries due to discounting effects from higher financing costs.

PRELIMINARY FINDINGS

# DREI Nigeria (Solar PV, 2020 1.2GW Target)

## (2) Tailored public instrument package

### PRELIMINARY FINDINGS

RISK CATEGORY	POLICY DERISKING INSTRUMENTS	FINANCIAL DERISKING INSTRUMENTS
<b>Power Market Risk</b>	<ul style="list-style-type: none"> <li>• Long term renewable energy targets</li> <li>• Regulatory framework</li> <li>• FIT/PPA tender (standardised PPA)</li> <li>• Independent regulator</li> </ul>	NA
<b>Permits Risk</b>	<ul style="list-style-type: none"> <li>• Streamlined permitting; one-stop shop; recourse mechanism</li> </ul>	NA
<b>Social Acceptance Risk</b>	<ul style="list-style-type: none"> <li>• Awareness-raising campaigns</li> <li>• Promote/pilot community-based approaches</li> </ul>	NA
<b>Resource &amp; Technology Risk</b>	<ul style="list-style-type: none"> <li>• Resource assessment</li> <li>• Technology support (solar PV)</li> </ul>	NA
<b>Grid/Transmission Risk</b>	<ul style="list-style-type: none"> <li>• Transparent, up-to-date grid code</li> <li>• Grid management/planning</li> </ul>	<ul style="list-style-type: none"> <li>• Take or pay clause in PPA<sup>11</sup></li> </ul>
<b>Counterparty Risk</b>	<ul style="list-style-type: none"> <li>• Strengthen utility's management</li> </ul>	<ul style="list-style-type: none"> <li>• Government guarantee of PPA</li> </ul>
<b>Financial Sector Risk</b>	<ul style="list-style-type: none"> <li>• Domestic financial sector reform</li> </ul>	<ul style="list-style-type: none"> <li>• Concessional public loans to IPPs</li> </ul>
<b>Political Risk</b>	NA	NA
<b>Currency/Macroeconomic Risk</b>	NA	<ul style="list-style-type: none"> <li>• Partial indexing of PPA tariffs to foreign currencies<sup>12</sup></li> </ul>

# DREI Nigeria (Solar PV, 2020 1.2GW Target)

## (2) Post-derisking financing cost waterfall

PRELIMINARY FINDINGS

# DREI Nigeria (Solar PV, 2020 1.2GW Target)

## (3) Measuring impact – levelised costs

### PRELIMINARY FINDINGS

# ***DREI Nigeria (Solar PV, 2020 1.2GW Target)***

## **(3) Measuring impact – performance metrics**

---

### PRELIMINARY FINDINGS

If **USD 301 m** is invested in public derisking measures to promote utility scale in Nigeria, this can have the following impacts:

#### **Catalysing private sector funding**

- USD 1.869 billion in private sector investment

#### **Generating economy-wide savings**

- USD 960 million in lower premium prices for Solar PV over the next 20 yrs

#### **Better affordability for end-users**

- Solar PV generation costs decrease from USD 10.5 cents/kWh to USD 7.7 cents/kWh

#### **Benefit the environment**

- Emission reductions of 26 Mt CO<sub>2e</sub> over next 20 years

# Conclusions

## Key take-aways

---

- A key opportunity for policymakers is to address the high financing costs for renewable energy in developing countries
- The best outcomes occur when policymakers address the risks to renewable energy investment in a systematic and integrated way
  - Risks can be addressed in one of three ways:
    - Reducing risk (policy derisking)
    - Transferring risk (financial derisking)
    - Compensating for risk (direct incentives)
- Investing in derisking (risk reduction or risk transfer) is more cost effective when measured against paying direct financial incentives, such as a premium price

1	UNDP, VERSION 1.0 (APRIL 2013)																
2																	
3	<b>DERISKING RENEWABLE ENERGY INVESTMENT</b>																
4	<b>FINANCIAL TOOL</b>																
5																	
6																	
7																	
8																	
9																	
10	<b>A. OVERVIEW</b>																
11	This financial tool supports the framework presented in UNDP's Derisking Renewable Energy Investment report to assist policymakers in selecting public instruments to promote renewable energy investment. The financial tool calculates the levelised cost of electricity (LCOE) for a given country's baseline energy mix and the LCOE of onshore wind energy, before and after the introduction of public instruments.																
12	Please go to UNDP's website to download the report, latest versions of this financial tool and other materials:																
13	<a href="http://www.undp.org/content/undp/en/home/library/energy/environment-energy/low_emission_climate/energy-development/derisking-renewable-energy-investment/">http://www.undp.org/content/undp/en/home/library/energy/environment-energy/low_emission_climate/energy-development/derisking-renewable-energy-investment/</a>																
14																	
15																	
16																	
17																	
18																	
19	<b>B. TABLE OF CONTENTS</b>																
20	This financial tool is organised into the following eight sheets:																
21																	
22																	
23	<b>I. Summary Outputs</b>																
24	<b>II. Inputs, Baseline Energy Mix</b>																
25	<b>III. Inputs, Wind Energy</b>																
26	<b>IV. LCOE, Baseline Energy Mix</b>																
27	<b>V. LCOE, Wind Energy</b>																
28	<b>VI. Additional Data</b>																
29	<b>VII. Supplementary Information</b>																
30	<b>VIII. User Notes</b>																
31																	
32	<b>C. IMPORTANT GUIDANCE</b>																
33	The following modelling conventions are used throughout this tool:																
34																	
35																	
36	<b>Input cells</b>																
37	- Input cells require the user to enter numeric data or to select an option from a drop-down menu.																
38	- Input cells are formatted in blue font. An example of the format is as follows: <input type="text" value="\$0"/>																
39	- Sometimes input cells may be formatted in purple font. This signifies that default input data is inserted to act as an initial guide. Users are invited to input their own data.																
40																	
41	<b>Output cells</b>																
42	- An output cell consists of a pre-existing formula. Do NOT enter data into an output cell. If the formula is overwritten, this could compromise the financial tool.																
43	- Output cells are formatted in black font.																
44																	
45	<b>Guidance comments</b>																
46	- The input sheets have a column with guidance comments. These comments provide explanatory notes, definitions and address common issues.																
47	- The column with guidance comments is initially hidden from view. To view the comments click on the ungroup symbol (which appears as a "-" sign) in the top right-hand corner of the sheet.																
48																	
49	<b>Checks</b>																
50	- Check cells will appear when there is an invalid entry of some sort. Check cells are formatted in red font. If it appears, the check cell provides guidance on how to rectify the invalid entry.																
51																	
52	<b>Protected sheets and cells</b>																
53	- In order to ensure that the tool maintains its functionality and formulae are not accidentally deleted and/or compromised, this tool is distributed with sheets and cells in 'protected' mode.																
54	To understand more about protected sheets and cells, click on the ungroup symbol in the top right-hand corner of the sheet.																
55	Introduction / I. Summary Outputs / II. Inputs, Baseline Energy Mix / III. Inputs, Wind Energy / IV. LCOE, Baseline Energy Mix / V. LCOE, Wind
