# Experience Sharing

Steps to identify gaps and needs in reporting

Mary Awad Menassa

Transparency Negotiator

Ministry of Environment

Article 13 of the Paris Agreement

Mandatory provisions for all

Mechanism to assess PA goal

CBIT

Katowice: Modalities, Procedures and Guidelines

Improvement has become a must

Entails a whole-of-government approach

Tracking national and international commitments - NDC

National Conversation | Priority

Reporting after the MPGs

Transition

National conversation in a step-wise approach

1. Identify your gap/need
2. Set the goal accordingly
3. Identify the relevant stakeholders
4. Request for support

5. Strategy

Different starting points: inventory, tracking progress, mitigation actions, projections, adaptation and support

MPGs → clear guidance for steps 2 and 5, taking into consideration the flexibilities and national priorities

Example

MISCA

1. Identify your gap/need

Unsustainable institutional arrangements to collect GHG inventory data and progress on mitigation action (both self-determined and ICA recommendation)

2. Set the goal accordingly

Pilot a system in which MoE and another ministry can sustainably and easily exchange data for the GHG inventory and the progress of mitigation action

3. Identify the relevant stakeholders

Largest sources of emissions are from the energy sector. MoE therefore prioritized MoEW to pilot the online system

4. Request for support

Proposal to the EU-ClimaSouth to develop an online platform: Management and Information System for Climate Action (MISCA) to pilot energy information exchange

5. Strategy:

Transparency strategy under CBIT → MPGs

Expanding MISCA under CBIT

Ultimate goal: NDC progress, GHG inventory, mitigation actions, adaptation actions and support

Important lessons learned

You will identify additional needs while carrying out the improvement then why you identified the gap

Your need will therefore evolve, accommodating the discovered circumstances

Determining your needs and addressing this need are two different things – but you're already halfway there if you're asking the correct question

The road to improvement gets more detailed as you improve

A long-term strategy shared by all relevant stakeholders ensures continuous improvement and engagement

Your need might not be the stakeholder's need

After Article 13 and the MPGs, support for reporting is more available and accessible

Useful tips to think about in advance

Avoid working in silos

Assess linkages between agendas and conventions

Sendai Framework   UNCCD   CBD

2030 Agenda for Sustainable Development

Address stakeholders and engage them holistically

Synchronize requests for support on data and indicators
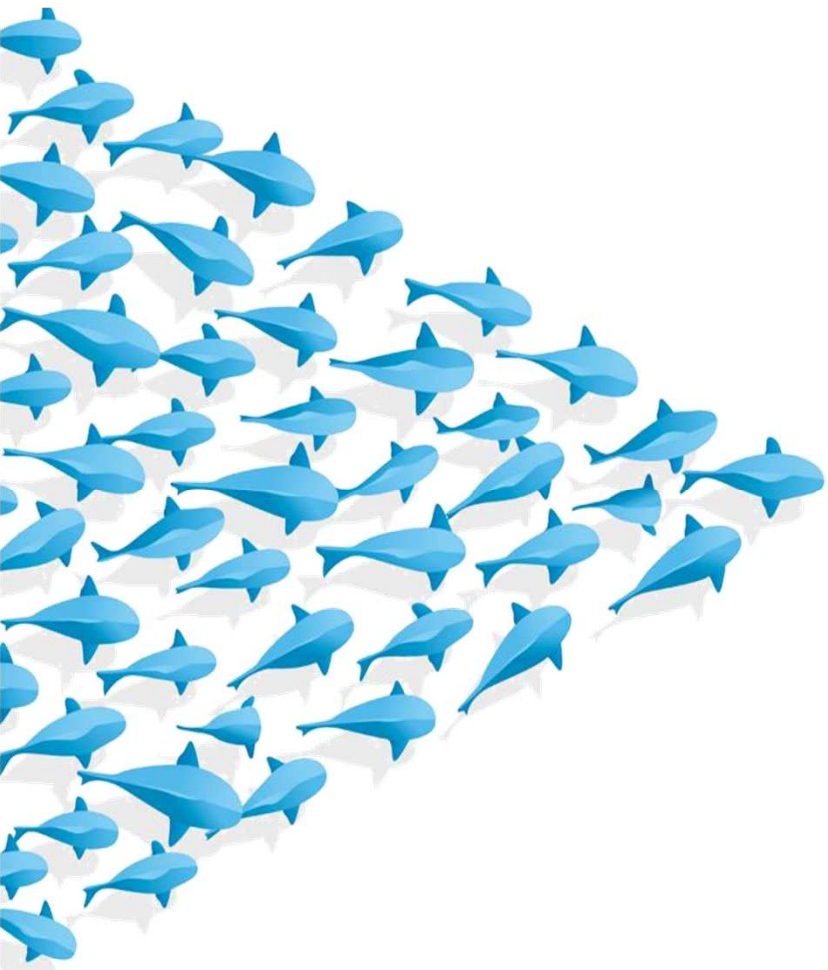

Institutionalize the coordination to the extent possible

SDG + NDC technical advisory group

Tedious process but beneficial in the long run

Thank you
