

# **U.S. EPA**

Latin American and Caribbean Regional  
Workshop

MRV of NAMAs as a  
Key Element of National MRV Systems

March 6-8, 2014

# Selected US EPA Activities on MRV

Monitoring	Reporting	Verification
GHG Inventory	Report to UNFCCC	Peer and public inventory review
Regulatory programs	Depends on program; could be facility level, product level, etc.	Federal government testing and auditing
Partnership mitigation programs	Annual Reports	Federal government auditing

# Inventories and NAMAS

- Because inventories are aggregate, top down estimates, they have limited usefulness for demonstrating progress on individual NAMAs.

**-- BUT --**

- They are a useful tool to ensure you are capturing the collective impact of your NAMAs, and to assure that the impact of a NAMA that may cut across multiple inventory categories is not being double-counted.

# How does the U.S. present its inventory and GHG policies?

- Annual inventory report submitted to UNFCCC since 1994
- National Communication, including discussion of GHG policies, every 4 years
- Biennial Report every 2 years
- Most recent NC and BR submitted Jan. 2014, reflecting 1990-2011 emission estimates

## Sixth National Communication of the United States of America

<b>Chapter 1</b>	Executive Summary	<b>50</b>
<b>Chapter 2</b>	National Circumstances	<b>57</b>
<b>Chapter 3</b>	Greenhouse Gas Inventory	<b>73</b>
<b>Chapter 4</b>	Policies and Measures	<b>96</b>
<b>Chapter 5</b>	Projected Greenhouse Gas Emissions	<b>134</b>
<b>Chapter 6</b>	Vulnerability, Assessment, Climate Change Impacts and Adaptation Measures	<b>151</b>
<b>Chapter 7</b>	Financial Resources and Transfer of Technology	<b>173</b>
<b>Chapter 8</b>	Research and Systematic Observations	<b>195</b>
<b>Chapter 9</b>	Education, Training, and Outreach	<b>228</b>
<b>Appendices</b>		<b>274</b>

# U.S. National Greenhouse Gas Inventory Basics

- Interagency technical effort led by EPA
  - Data and input provided by other U.S. agencies: Energy, Agriculture, Forest Service, etc.
  - U.S. Department of State formally submits

- Multiple levels of verification

- 1) EPA and consultant review
- 2) Independent expert review
- 3) Public Review (30 days)
- 4) International expert review

Before UNFCCC submission

After UNFCCC submission

# Selected mitigation actions from NC6 (Jan. 2014)

Name of Policy or Measure	Objective and/or Activity Affected	GHGs Affected	Types of Instrument	Status	Implementing Entities	Estimated Mitigation Impacts (Tg CO <sub>2</sub> e)		
						2011	2015	2020
<b>Transportation</b>								
National Program for Light-Duty Vehicle GHG Emissions and CAFE Standards	Establishes corporate average fuel economy and GHG emission standards for new light-duty vehicles (LDVs) produced for sale in the U.S.	CO <sub>2</sub> , HFCs	Regulatory	Implemented	DOT/EPA	35.0	92.0	236.0
<b>Energy: Residential, Commercial, and Industrial End Use</b>								
Appliance and Equipment Energy Efficiency Standards	Establish minimum energy conservation standards for more than 50 categories of appliances and equipment.	CO <sub>2</sub>	Regulatory	Implemented	DOE	156.0	195.0	216.0
<b>Waste Management/Waste</b>								
Landfill Methane Outreach Program	Reduces GHG emissions at landfills by supporting the recovery and use of landfill gas for energy.	CH <sub>4</sub>	Voluntary, Information	Implemented	EPA	15.8	14.3	15.7

# Evaluating impact of policies

- **Regulatory policies:** codified in law. Regulation includes economic assessment, as well as GHG reduction projections. Laws are enforced by federal agencies.
  - Vehicle GHG emission standards: EPA tests the GHG performance of all vehicles sold in the US
  - Appliance and energy efficiency standards: DOE tests energy efficiency of more than 50 categories of appliances and equipment
- **Voluntary programs:** partnerships with private companies, who agree to submit annual progress reports
  - Landfill methane outreach program: information collected from industry is used to measure progress

# Example: measuring progress at landfills

## Inventory trend: top-down snapshot

- GHG emissions from landfills have decreased by 30 percent from 1990 to 2012.
- Decrease is due to a combination of measures: federal regulations requiring landfill gas combustion, voluntary programs encouraging energy recovery and use (NAMA), and federal and state incentives that promote renewable energy.

## EPA's Landfill Methane Outreach Program (NAMA)

- Voluntary Partnership with landfills seeking to install waste-to-energy projects.
- In 2012, methane emissions were reduced by 6.3 MMTCO<sub>2</sub>e by LMOP partners as a result of 44 new projects/expansions.

# Summary

- A high-quality national GHG inventory is an important foundation to identify sectors in which you might take mitigation actions.
- Mitigation activities require their own discrete monitoring, reporting and verification processes; a country can not rely upon its inventory alone to demonstrate progress on a NAMA.
- However, inventories ARE useful to demonstrate economy-wide emission reductions, and to ensure that impact of a NAMA that may cut across multiple inventory categories is not being double-counted.

# **Additional Slides: The Institutional Arrangements for the U.S. GHG Inventory**

# U.S. National GHG Inventory Institutional Arrangements

- U.S. EPA has decentralized approach to preparing inventory
  - U.S. EPA inventory coordinator collects emission estimates from individual source leads (EPA staff)
    - Aggregates emissions, prepares inventory report, presents formal submission materials to U.S. Dept. of State, sends electronic submission to UNFCCC through on-line portal, archives each inventory submission

# Roles: U.S. EPA Source Category Leads

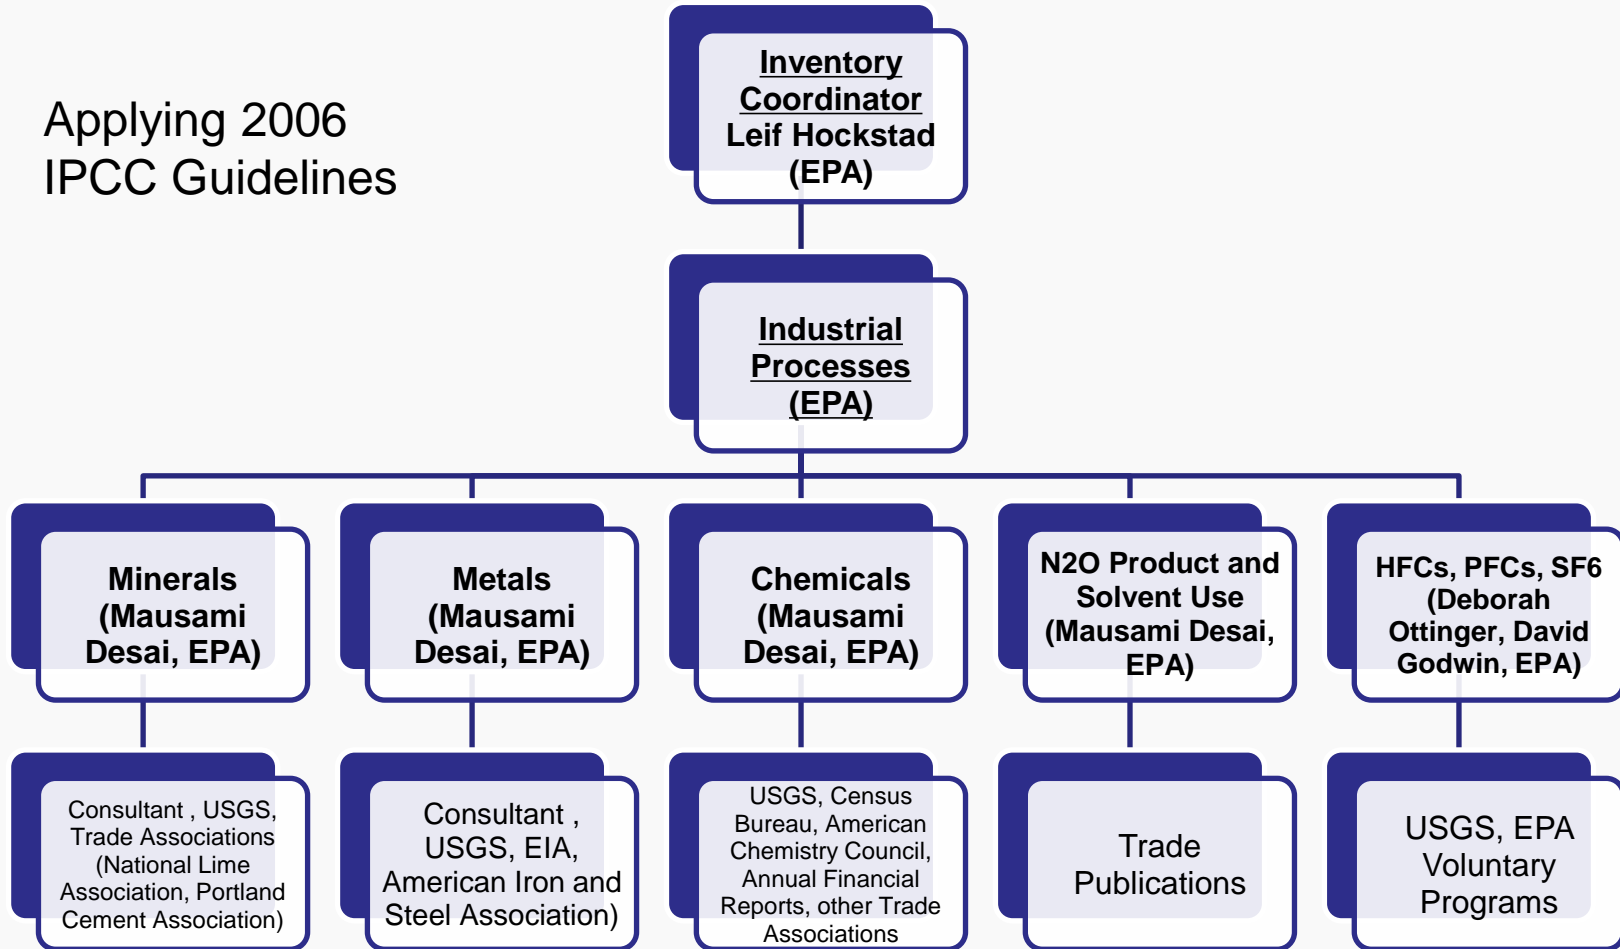

- Individual source leads manage each source category’s calculations
  - Determine methodology, coordinate data sources, manage improvements
- Inventory coordinator defines approach to manage process through annual “kick-off memo”
  - Source lead roles & responsibilities, reference, QA/QC approaches and archiving, timeline and deadlines

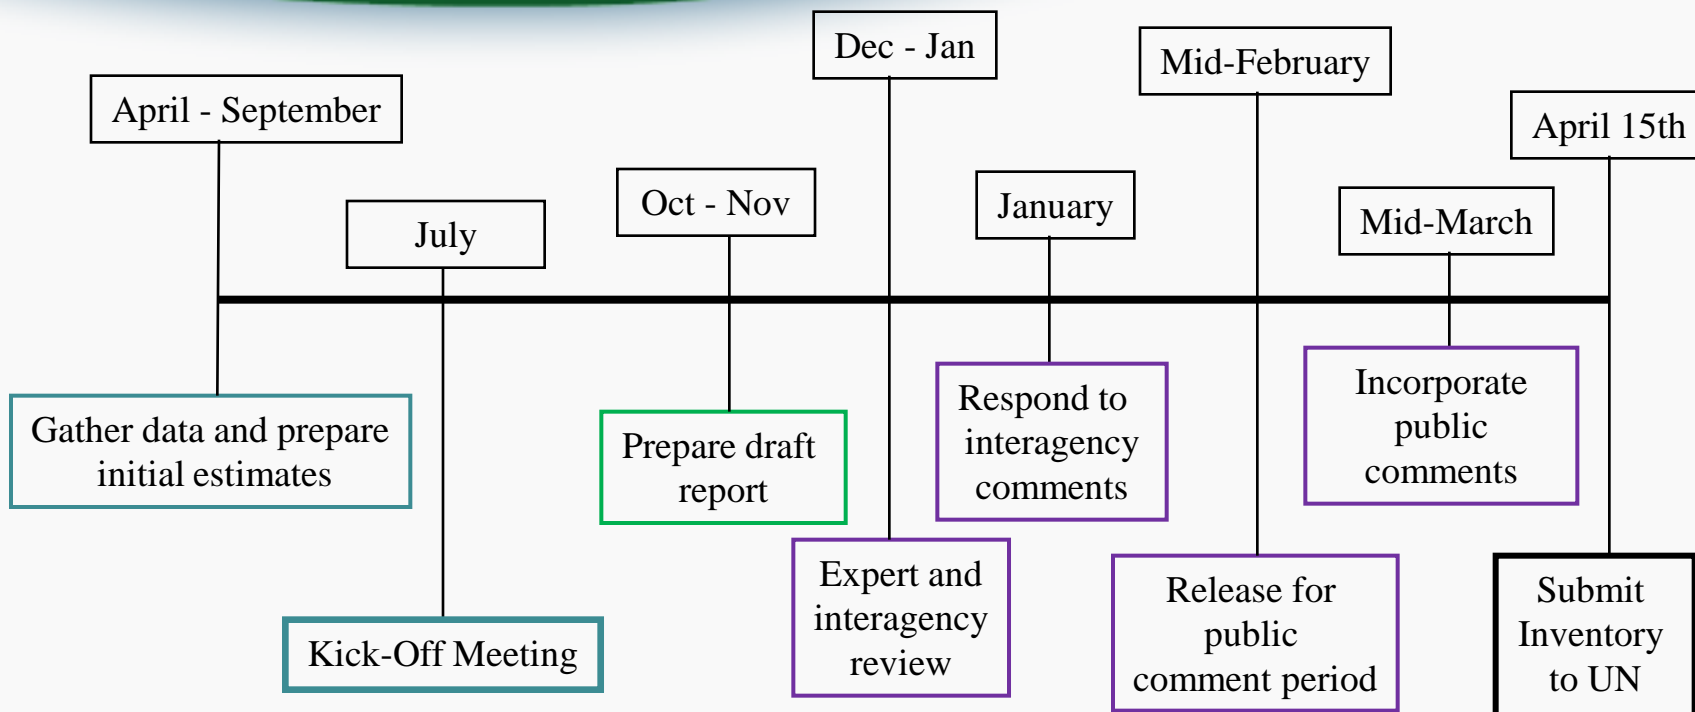

# Example: Institutional Arrangements for Industrial Processes

Applying 2006  
IPCC Guidelines

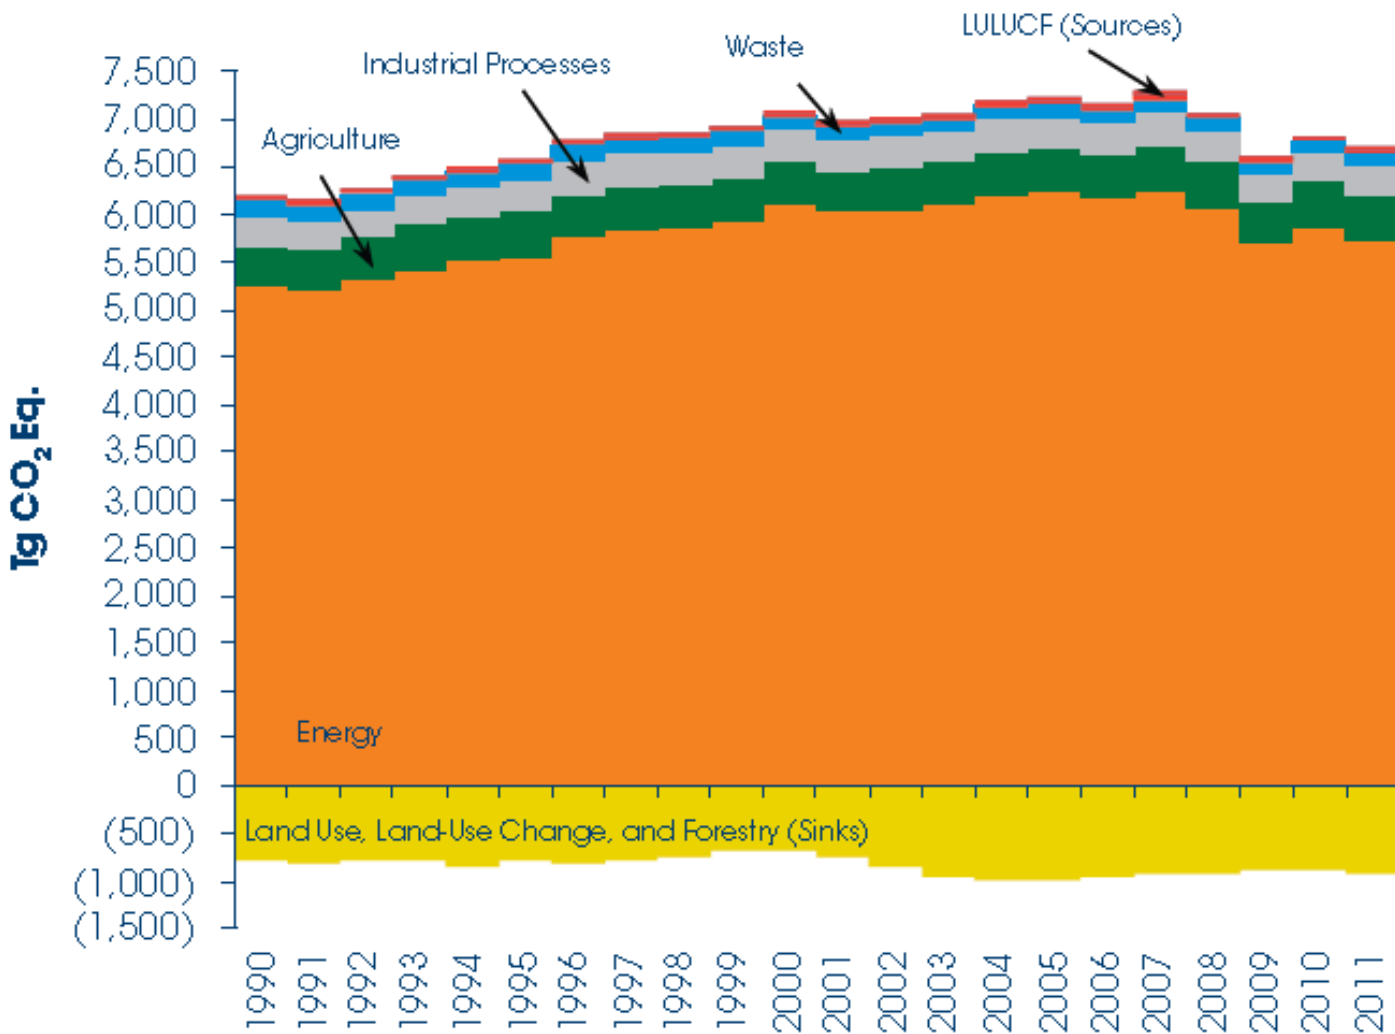

# Timeline for U.S. GHG Inventory Preparation

- **Inventory planning**
  - Selection of methodology, equations, models
  - Data collection and generation of estimates
- **Inventory compilation**
  - Process and synthesis of estimates
  - Internal data analysis
- **Review process**
  - Review and comment by other U.S. agencies, experts, scientists and review by general public
    - 30 day review period announced in the U.S. Federal Register

# Key findings: 2013 inventory

US GHG emissions in 2011 = 6,702.3 Tg CO<sub>2</sub>e

1.6% decline from 2010 to 2011, due to decrease in energy consumption across most sectors and a decrease in carbon intensity for electricity generation

# Key categories – 2013 inventory

Key Categories as a Portion of All Emissions
