

NAMAs and INDC Experience and Lesson Learnt

Syamsidar Thamrin Deputy Director for Weather and Climate National Development Planning Ministry (BAPPENAS)

Presentation Structure

1. NAMAs Development

- **INDC** Development
- **Benefits INDC from NAMAs** 3.

1. NAMAs Development

Relation of National Mitigation Action Plan and NAMAs

Main components that need to be reviewed

Base Year: 2010 (starting year of calculation of mitigation action)

BAU Baseline vs FREL

Mitigation scenario: worst case (BAU Baseline), regular/fair case (existing policies), the best case (deeper cut/ambitious)

Organizational role & functions: Line Ministries/Governor/Head of District/Mayor

Mitigation Action Matrix : update from RPJM 2015-2019 & activities that require international support

Source of Fund/Incentive: elaboration of funds from private sectors and community as well as international funds

Steps of Review RAN-GRK

Review of results from Monitoring & Evaluation of RAN-GRK Implementations

> Review of mid-term development program (2015-2019) related to climate change issues

> > Development of Model: aims to see the mitigation scenarios and the consequences in the future

Revision of Presidential Regulation (*Perpres*) 61/2011

2.INDC Development

Indonesia approach to RAN-GRK (NAMAs) and INDC

STEPS TO CONDUCT INDC:

- 1. Develop Indonesia GHG Emission baseline – trajectory from 2010-2030/2045.
- 2. Evaluate result of RAN-GRK 2010-2014, and determine the level of GHG emission reduced compared to the baseline.
- 3. Review proposed policy intervention proposed in the midterm dev program 2015-2019, and determine the amount GHG emission reduced compared to the baseline in 2020.
- 4. Review the 26% target in 2020. Decision makers will refine the existing target for INDC or put more policy intervention to achieve the 26% target.
- 5. Define the new target for INDC in 2045 with comprehensive policy intervention across sectoral line agencies

Note: * INDC shall use similiar conceptualization with RAN-GRK and for Indonesia

3. Benefits for INDC from NAMAs

Linkages between RAN-GRK and INDC

nenterian PPN

Indonesia INDC is a by-product of Indonesia Mitigation Policy (RAN-GRK) Review Process.

From NAMAs process, INDC development benefits:

- Easier to communicate with stakeholders because still talking about the same concept only longer time-frame: NAMAs is by 2020 while INDC beyond 2020
- Talking about similar technical issues: baseline, base year, methodology, emission target at national level, per sector, and per region
- Assessment about how big domestic capacity to reduce emission, the potential and expectation of international supports have been done before
- Using the similar technical working groups with extensive experience about NAMAs about the same sectors
